# Introduction

# Introduction

🙄 Frequency compensation?

# Introduction

 Frequency compensation?

 Frequency compensation is the application of techniques to correct the frequency response of an amplifier

# Introduction

 Frequency compensation?

 Frequency compensation is the application of techniques to correct the frequency response of an amplifier

 Structured design: without unintentionally degrading performance aspects that have been designed earlier

# Introduction

 Frequency compensation?

 Frequency compensation is the application of techniques to correct the frequency response of an amplifier

 Structured design: without unintentionally degrading performance aspects that have been designed earlier

# Design approach

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

$$A_f(s) = \overbrace{A_i(s)}^{\text{Ideal gain}}$$

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

$$A_f(s) = \underbrace{A_i(s)}_{\text{Ideal gain}} \underbrace{\frac{-L_{MB}}{1-L_{MB}}}_{\text{midband accuracy}}$$

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

$$A_f(s) = \underbrace{A_i(s)}_{\text{Ideal gain}} \underbrace{\frac{-L_{MB}}{1-L_{MB}}}_{\text{midband accuracy}} \underbrace{\frac{b_k s^k}{1+b_1 s+b_2 s^2+\dots+b_k s^k}}_{\text{high-pass cut-off}}$$

# Design approach

Independent correction of high-pass and low-pass cut-off behavior

$$A_f(s) = \underbrace{A_i(s)}_{\text{Ideal gain}} \underbrace{\frac{-L_{MB}}{1-L_{MB}}}_{\text{midband accuracy}} \underbrace{\frac{b_k s^k}{1+b_1 s+b_2 s^2+\dots+b_k s^k}}_{\text{high-pass cut-off}} \underbrace{\frac{1}{1+a_1 s+a_2 s^2+\dots+a_n s^n}}_{\text{low-pass cut-off}}$$

# Techniques

# Techniques

## 1. Insertion of phantom zeros

# Techniques

1. Insertion of phantom zeros
2. 'Pole-splitting' by increasing the interaction between two poles

# Techniques

1. Insertion of phantom zeros
2. 'Pole-splitting' by increasing the interaction between two poles
3. 'Pole-splitting' through pole-zero canceling

# Techniques

1. Insertion of phantom zeros
2. 'Pole-splitting' by increasing the interaction between two poles
3. 'Pole-splitting' through pole-zero canceling
4. 'Resistive broadbanding' by exchanging a pole frequency with midband loop gain

# Techniques

- ✓ 1. Insertion of phantom zeros
- ✗ 2. 'Pole-splitting' by increasing the interaction between two poles
- ✗ 3. 'Pole-splitting' through pole-zero canceling
- ✗ 4. 'Resistive broadbanding' by exchanging a pole frequency with midband loop gain

# Strategies

# Strategies

1. Maintain the bandwidth designed at an earlier stage

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
2. Exchange bandwidth of ideal transfer with that of servo function

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
2. Exchange bandwidth of ideal transfer with that of servo function
  - a. The obtained bandwidth is much more than required

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
2. Exchange bandwidth of ideal transfer with that of servo function
  - a. The obtained bandwidth is much more than required
  - b. The bandwidth of the ideal gain can be reduced

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
2. Exchange bandwidth of ideal transfer with that of servo function
  - a. The obtained bandwidth is much more than required
  - b. The bandwidth of the ideal gain can be reduced
3. Reduce the bandwidth of the loop gain

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
2. Exchange bandwidth of ideal transfer with that of servo function
  - a. The obtained bandwidth is much more than required
  - b. The bandwidth of the ideal gain can be reduced
3. Reduce the bandwidth of the loop gain
  - a. The obtained bandwidth is more than required

# Strategies

1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
2. Exchange bandwidth of ideal transfer with that of servo function
  - a. The obtained bandwidth is much more than required
  - b. The bandwidth of the ideal gain can be reduced
3. Reduce the bandwidth of the loop gain
  - a. The obtained bandwidth is more than required
  - b. The number of dominant poles is too large to deal with

# Strategies

- ✓ 1. Maintain the bandwidth designed at an earlier stage
  - a. The obtained bandwidth is adequate
  - b. There is no margin to reduce it
- ✗ 2. Exchange bandwidth of ideal transfer with that of servo function
  - a. The obtained bandwidth is much more than required
  - b. The bandwidth of the ideal gain can be reduced
- ✗ 3. Reduce the bandwidth of the loop gain
  - a. The obtained bandwidth is more than required
  - b. The number of dominant poles is too large to deal with
